

Unsupervised Image-to-Image Translation Networks

Ming-Yu Liu, Thomas Breuel, Jan Kautz

Unsupervised Image-to-Image Translation

Supervised x_i, y_i **Unsupervised** X_1, X_2

A Probabilistic Point of View

$$\left\{ \begin{array}{c} \text{[Sunny Road, Sunny Road]} \\ \text{[Snowy Road, Snowy Road]} \end{array} \right\} \sim P_{X_1} \quad \left\{ \begin{array}{c} \text{[Night Road, Night Road]} \\ \text{[Snowy Road, Snowy Road]} \end{array} \right\} \sim P_{X_2}$$

$$\left\{ \begin{array}{c} \text{[Sunny Road, Night Road]} \\ \text{[Snowy Road, Night Road]} \end{array} \right\} \sim P_{X_1, X_2}$$

Estimate the joint distribution of images in different domains using samples from the marginal distributions.

- Ill-posed problem.
- Need additional assumptions.

Shared Latent Space Assumption

\mathcal{Z} : shared latent space

$x_1 \rightarrow E_1 \rightarrow G_1 \rightarrow \tilde{x}_1^{1 \rightarrow 1}, \tilde{x}_2^{2 \rightarrow 1} \rightarrow D_1 \rightarrow \text{T/F}$

$x_2 \rightarrow E_2 \rightarrow G_2 \rightarrow \tilde{x}_1^{1 \rightarrow 2}, \tilde{x}_2^{2 \rightarrow 2} \rightarrow D_2 \rightarrow \text{T/F}$

Learning Objective

$$\min_{E_1, E_2, G_1, G_2} \max_{D_1, D_2} \mathcal{L}_{\text{VAE}_1}(E_1, G_1) + \mathcal{L}_{\text{GAN}_1}(E_1, G_1, D_1) + \mathcal{L}_{\text{CC}_1}(E_1, G_1, E_2, G_2)$$

$$\mathcal{L}_{\text{VAE}_2}(E_2, G_2) + \mathcal{L}_{\text{GAN}_2}(E_2, G_2, D_2) + \mathcal{L}_{\text{CC}_2}(E_2, G_2, E_1, G_1).$$

$$\mathcal{L}_{\text{GAN}_1}(E_1, G_1, D_1) = \lambda_0 \mathbb{E}_{x_1 \sim P_{\mathcal{X}_1}} [\log D_1(x_1)] + \lambda_0 \mathbb{E}_{z_2 \sim q_2(z_2|x_2)} [\log(1 - D_1(G_1(z_2)))]$$

$$\mathcal{L}_{\text{GAN}_2}(E_2, G_2, D_2) = \lambda_0 \mathbb{E}_{x_2 \sim P_{\mathcal{X}_2}} [\log D_2(x_2)] + \lambda_0 \mathbb{E}_{z_1 \sim q_1(z_1|x_1)} [\log(1 - D_2(G_2(z_1)))]$$

$$\mathcal{L}_{\text{VAE}_1}(E_1, G_1) = \lambda_1 \text{KL}(q_1(z_1|x_1) || p_\eta(z)) - \lambda_2 \mathbb{E}_{z_1 \sim q_1(z_1|x_1)} [\log p_{G_1}(x_1|z_1)]$$

$$\mathcal{L}_{\text{VAE}_2}(E_2, G_2) = \lambda_1 \text{KL}(q_2(z_2|x_2) || p_\eta(z)) - \lambda_2 \mathbb{E}_{z_2 \sim q_2(z_2|x_2)} [\log p_{G_2}(x_2|z_2)].$$

$$\mathcal{L}_{\text{CC}_1}(E_1, G_1, E_2, G_2) = \lambda_3 \text{KL}(q_1(z_1|x_1) || p_\eta(z)) + \lambda_3 \text{KL}(q_2(z_2|x_1^{1 \rightarrow 2}) || p_\eta(z)) - \lambda_4 \mathbb{E}_{z_2 \sim q_2(z_2|x_1^{1 \rightarrow 2})} [\log p_{G_1}(x_1|z_2)]$$

$$\mathcal{L}_{\text{CC}_2}(E_2, G_2, E_1, G_1) = \lambda_3 \text{KL}(q_2(z_2|x_2) || p_\eta(z)) + \lambda_3 \text{KL}(q_1(z_1|x_2^{2 \rightarrow 1}) || p_\eta(z)) - \lambda_4 \mathbb{E}_{z_1 \sim q_1(z_1|x_2^{2 \rightarrow 1})} [\log p_{G_2}(x_2|z_1)].$$

Visualization Results

Ablation & Hyper-parameter Study

Method	Accuracy
Weight Sharing	0.569 ± 0.029
Cycle Consistency	0.568 ± 0.010
Proposed	0.600 ± 0.015

Accuracy

of shared layers in gen.

λ_2

Method: $\Delta 6L \text{ Dis}$, $\diamond 5L \text{ Dis}$, $\square 4L \text{ Dis}$, $\circ 3L \text{ Dis}$

Domain Adaptation

Method	DANN	DTN	CoGAN	UNIT
SVHN \rightarrow MNIST	73.85	84.88		90.53
MNIST \rightarrow USPS			95.65	95.97
USPS \rightarrow MNIST			93.15	93.58

Conclusion

- A Coupled GAN framework for unsupervised image-to-image translation.
- Dealing with the ill-posed joint distribution learning problem via the shared latent space assumption and adversarial training.
- Shown translation results on various street scenes (640x480) and animal portraits (200x200).
- Good performance on digit domain adaptation
